## DETAILED ACTION

### *Examiner Reasons for Allowance*

The claimed method involving the diameter range, the depth, and well-depth of the cavitated fiber optic wafer, said wafer being formed from a fused bundle of a plurality of individual optical fibers, is deemed non-obvious over the general teaching provided for by Chee et al. (of record), based on Margulies Declaration, as each of the above-mentioned parameters of the fiber optic wafer is critical to the laminar flow of the reaction reagents, allowing for rapid diffusion and washing out of the nucleotides, enabling a high cycle sequencing (see page 3; Margulies Declaration).

Hence, the parameters are no longer deemed arbitrary, not involving routine optimization, as the parameters are specifically adapted to the way in which the disclosed invention operates.
